

Sub phase-5 user acceptance testing

Date	28-09-2026
Team ID	SWTID-2026-7624
Project name	Script-controlled ACL
Maximum mark	4 marks

1. UAT Objective

The objective of User Acceptance Testing is to verify that the Script-Controlled ACL works as intended for authorized users. The testing focuses on access to Institution Details records based on configured user roles, permissions, and ACL rules.

2. UAT Scope

- Verification of access to Institution Details records.
- Verification of configured users and roles.
- Verification of the Script-Controlled ACL.
- Verification of Create, Read, Write, and Delete permissions.
- Verification that authorized users can perform permitted operations.
- Verification that access follows the configured ACL conditions.

3. User Acceptance Test Cases

Test Case ID	Test Scenario	Expected Result	Status
UAT-01	Admin user accesses an Institution Details record.	Admin user should be allowed to access the record.	PASS
UAT-02	Authorized EEE user accesses a permitted Institution Details record.	Authorized user should be allowed to access the permitted record.	PASS
UAT-03	Authorized user accesses an Institution Details record according to the configured ACL rule.	Access should be granted when the configured ACL condition is satisfied.	PASS
UAT-04	Authorized user attempts to create an Institution Details record.	Record should be created when the user has the required create permission.	PASS
UAT-05	Authorized user attempts to update an Institution Details record.	Record should be updated when the user has the required write permission.	PASS
UAT-06	Authorized user attempts to delete an Institution Details record.	Record should be deleted when the user has the required delete permission.	PASS

4. UAT Acceptance Criteria

Acceptance Criteria	Expected Outcome
Admin access	Admin can access the required Institution Details record.
Authorized user access	

	Authorized EEE user can access permitted records.
ACL validation	Access is controlled by the configured ACL script.
Create permission	Authorized users can create records when permission is provided.
Read permission	Authorized users can view permitted records.
Write permission	Authorized users can update permitted records.
Delete permission	Authorized users can delete records when permission is provided.

5. Test Evidence

The following project evidence is used to support UAT:

1. ACL Script – Shows the script used for access control.
2. Institution Details Record – Shows the record used for testing.
3. EEE User Configuration – Shows the authorized user configuration.
4. User Roles Configuration – Shows the roles configured in ServiceNow.

The supplied project document identifies these four items as supporting UAT evidence.

6. UAT Summary

UAT Metric	Result
Total Test Cases	6
Passed	6
Failed	0
Overall Status	PASS

All six UAT scenarios in the supplied report are recorded as Pass.

7. UAT Sign-Off

Item	Details
Tested By	Haniya Thasneem
Reviewed By	Haniya Thasneem
Date	28.09.2026
Final UAT Status	PASS

8. Conclusion

The User Acceptance Testing confirms that the Script-Controlled ACL – Restrict Record Access Based on Field Value project satisfies the defined UAT scenarios. The configured ACL, user roles, and permissions provide the expected access behavior for Institution Details records, including the tested Create, Read, Write, and Delete operations. The final UAT status recorded in the project report is PASS.
