

Sub phase-1 empathy map

Date	28-09-2026
Team ID	SWTID-2026-7624
Project name	Script-controlled ACL
Maximum marks	4 Marks

An Empathy Map helps us understand the needs, mindset, and pain points of our primary target user—the Departmental User / EEE Staff Member—who interacts with the ServiceNow u_institution_details table daily.

Pains vs. Gains Breakdown

⇒ From Frustrations to a Smarter, Safer Solution ⇒

Pains

(Frustrations & Bottlenecks)

1 Cross-Department Exposure

- Risk of sensitive student information (Email, Phone Number) being viewed by unauthorized branches.

2 Cluttered Interfaces

- Having to manually filter out ECE and CSE records every time the table is opened.

3 Accidental Data Loss

- Risk of unauthorized users modifying or deleting EEE branch records.

Gains

(Desired Outcomes & Benefits)

1 Automated Data Segregation

- The list view automatically filters and displays only Branch = EEE records upon opening.

EEE Records (Auto Filtered)

Name	Branch
Aarthi	EEE
Fathima	EEE
Rahul	EEE

2 Precise Access Control

- Clear separation of operational capabilities using custom roles (bb1 for Read, bb2 for Create, bb3 for Write, bb4 for Delete).

3 Data Integrity & Compliance

- Institutional data security standards are enforced seamlessly via script-controlled ACLs.
